District 7, Ho Chi Minh, Vietnam • thanh taiwork04@gmail.com • +84 328 329 908 • [linkedin.com/in/tai-nt](https://www.linkedin.com/in/tai-nt)

Detail-oriented Software Engineering student specializing in frontend and mobile development with React Native, React, and TypeScript. Passionate about crafting intuitive user interfaces and actively building backend expertise to grow into a full-stack engineer. Focused on delivering scalable, impactful solutions to real-world problems.

EDUCATION

Bachelor of Software Engineering

Sep 2022 - Mar 2026

University of Information Technology (UIT - VNUHCM)

GPA: 8.51/10

- Achieved "Very Good" grades in all semesters (2022–2024).
- Achieved "Excellent" grades in the first semester of the third year (2025).

LANGUAGES

English (Professional working proficiency)

WORK EXPERIENCE

Software Engineer

Jun 2025 - Present

Grab Holdings Limited

Ho Chi Minh City

- Micro-frontend Architecture:** Contributed to the migration towards a micro-frontend architecture using **Module Federation**, enabling independent deployment of configuration modules and reducing build times.
- Complex State Management:** Architected a multi-layer state strategy utilizing **Zustand** for UI state and **TanStack Query** for server state caching and optimistic updates, ensuring high performance for data-heavy dashboards.
- System Design & Patterns:** Implemented a reusable **API Factory Pattern** with Zod schema validation, ensuring type-safe communication between the React frontend and backend services.
- Advanced UI Implementation:** Integrated and customized **Monaco Editor** within the platform to support custom Domain Specific Languages (DSL), including syntax highlighting and diff viewing for configuration files.
- UI/UX Standardization:** Utilized **Ant Design (@duxtion-web/ui)** to build responsive, accessible enterprise components, strictly adhering to the internal design system.

Intern, Frontend Developer

Dec 2024 - Mar 2025

TMA Solutions

Ho Chi Minh City

- Developed a Voucher Management System dashboard using **Next.js**, **Material UI**, and **Tailwind CSS**.
- Built complex data visualization reports with interactive filtering, allowing admins to track voucher usage and error logs efficiently.
- Optimized frontend performance by implementing effective data fetching strategies and responsive layouts.

SKILLS

Programming Languages: TypeScript, JavaScript, Go

Frontend Development: React, Webpack 5, Nx Monorepo, React Router, TanStack Query, Redux Toolkit, Zustand, Ant Design, Tailwind CSS, Zod

Backend Development: Go, Rest API, GraphQL, MongoDB, PostgreSQL, MySQL

Mobile Development: React Native, Firebase

Soft Skills: System Design Thinking, Problem Solving, Data Modeling, Collaboration, Adaptability, Time Management, Ownership.

PROJECTS

Resort Management System (Course Project - 5 Members - Frontend, UI/UX) [↗](#)

Sep 2024 - Jan 2025

- Description:** The Resort Management System (RMS) is a comprehensive software solution designed to streamline resort operations, from guest services to administrative tasks. RMS offers an integrated, web-based platform accessible from desktops, tablets, and mobile devices, making it a scalable and adaptable solution for resorts of all sizes.
- Responsibility:** Configured the project folder structure and set up Axios interceptors to enhance security and streamline Backend API communication for **RTK Query**. Designed and implemented user flows for browsing available rooms, viewing detailed room information, and completing bookings, ensuring a smooth and intuitive experience. Focused on scalability and maintainability by organizing code modules effectively and optimizing API handling for improved performance and reliability.
- Technology Used:** ReactJS, TypeScript, RTK Query, Material UI, Netlify.
- Website:** [link](#)

NFT-Based Notarization Platform (Course Project - 11 Members - Frontend, UI/UX) [↗](#)

Sep 2024 - Dec 2024

- Description:** This platform provides secure, efficient online notarization by utilizing blockchain and NFT technology for document storage, transforming traditional notarization with digital transparency and trust.
- Responsibility:** Designed and developed the front-end and UI/UX for a seamless user experience, implemented secure document upload and storage with NFT technology, integrated blockchain-backed verification for enhanced security, and created workflows for digital signatures and document verification.
- Technology Used:** ReactJS, JavaScript, Redux Toolkit, Material UI.
- Website:** [link](#)

Custom T-Shirt & Tote Design with AI (Course Project - 5 Members - Mobile, UI/UX) [↗](#)

Mar 2024 - Jun 2024

- **Description:** An easy-to-use AI app that allows users to create and sell unique t-shirts and totes, offering design suggestions, mockup options, and managing orders.
- **Responsibility:** Completed end-to-end UI/UX design and coded the entire front-end, including image upload and mockup placement for t-shirts and tote bags, AI-powered image generation, background removal, and editing tools for custom designs; developed product selection, material choice, and order details display; integrated GiaoHangNhanh for shipping calculations and PayOS for secure payments.
- **Technology Used:** React Native, Firebase.
- **Repository:** [link](#)

Coffee Shop Management System (Course Project - 5 Members - Mobile, UI/UX) [↗](#)

Mar 2024 - Jun 2024

- **Description:** Developed a mobile app for coffee shop management, covering customer purchasing, admin store management, and cashier order processing for streamlined operations, with a focus on Android devices using React Native.
- **Responsibility:** Designed and developed the entire UI/UX and front-end interface, implemented role-based navigation for customers, admins, and cashiers, integrated Redux for efficient state management, and connected to payment and delivery APIs to streamline the purchasing and order processing experience.
- **Technology Used:** React Native, Firebase.
- **Repository:** [link](#)

AWARDS

SEAPP CONTEST 2024 by Faculty of Software Engineering - UIT - VNUHCM

Nov 2024

Awarded the **Consolation Prize** for the project "Enigma - Custom T-Shirt & Tote Design with AI Platform", recognized as one of the top innovations. The platform showcased advanced mobile development, seamless integration of AI-powered machine learning, and ecommerce solutions, enabling efficient product customization, order management, and a user-friendly shopping experience.
